IT Assessment & Maturity Roadmap

Is it time for your IT health checkup?

If we're being honest—few of us look forward to our annual physical or dental cleanings... right? Many neglect (or actively avoid) routine visits in favor of a break/fix approach to their health.

The problem—of course—with that mindset is that by the time a problem is realized... it's often too late to correct course and in many cases requires more drastic measures.

For SMBs—IT health cannot just be a passing (or optional) reminder. The health and performance of your network and systems is vital the overall success of your business. Tech debt (aging systems), security gaps, and an incomplete view of IT will all have an impact on your decision-making and have lasting effects on your organization.

CAN YOU CONFIDENTLY ANSWER THE FOLLOWING?

- When was the last time critical system passwords were changed?
- Are you leveraging multi-factor (MFA) to secure accounts?
- What is your Business Continuity & Disaster Recovery Plan in case of emergency?
- Do you have a complete breakdown of ALL devices on your network? (Windows? Macs? Servers? Printers?)
- What would happen if your firewall went offline?
- Are any of your mission-critical servers or sensitive databases unprotected?
- Are all system and device software updates being installed on a regular basis?
- What steps are you taking next and what systems will further help you with data, insights, and innovation?

IT Assessment Benefits

- ✓ Identify IT strengths and areas for improvement
- ✓ Identify unknown IT risks to develop mitigation strategies & reduce risk
- ✓ Aid in developing technology & maturity roadmap(s)
- ✓ Highlight opportunities for cost reduction or optimization
- ✓ Confidence to take iterative & compounding steps toward IT maturity

If you answer “No” or “I don’t know” to any of these questions...

YOUR IT HIERARCHY OF NEEDS

Setting Your Network & Infrastructure Up For Success

Every organization is unique—each with its own infrastructure, challenges, and goals. That’s why we tailor each IT assessment and roadmap project to your specific criteria and goals.

Our mission is to provide you with a complete understanding of your IT foundation, so that we can chart a path forward and confidently take next steps. That’s why we pair our **IT Assessment** and **IT Maturity Roadmap**. Without both—you’ll either be missing critical technology and security insights OR expert guidance for improvement.

STEP 1: YOUR “CURRENT STATE”

Assessing Your Network For Opportunities, Problems, & Risk

Our IT Assessment is designed to provide a comprehensive overview and understanding of your current infrastructure. It evaluates the technology and solutions you have in place—and how they support critical business functions.

During an assessment, we deploy a non-intrusive network scanning tool to identify hardware, devices, software status, and more—gathering hundreds of data points to compile and build:

- Comprehensive Network Map
- Asset Summary (All Devices)
- Software Status (Age Report)
- Business Services & Applications
- Security Vulnerabilities & Risk Report
- And Much More...

STEP 2: YOUR "FUTURE STATE"

Mapping Next Steps: Aligning Your IT & Business Goals

Now that we have a complete understanding of your infrastructure as well as alignment on your business priorities and goals—we will build a customized 6–12 month roadmap for your critical IT operations and improvement.

We'll provide you with the technology guidance and support to reach milestones that increasingly contribute back to your bottom line and workforce productivity. This frees up your internal resources to focus on day-to-day tasks, relationship building, and revenue growth.

CONFIDENCE.
RELIABILITY.
PERFORMANCE.
